Active now to activate the license. You can also activate licenses from the my license tab. Include a license manually If you have already obtained a license, you can include a license in my licenses to add a manually active license. You can activate your license on this NAS by choosing to use a license key or autonomous activation. Autonomous activation is a service used when NAS cannot directly connect to a licensed server. (1) Choose to use the license key of the next one, enter the license key, and then click the Activate button. (2) Select Offline Activation's next download. Once you've downloaded the Device Identification File (DIF), click Next. Download the file to the NAP license website: click My Licenses to add a license. Select Import Mode and Activate: Enter the key license to transfer the product from the Product Authorization Key (PAK) After authorization, click the Activation button and install the zgt; activate on the CTC of the offline activation of the browser, then download the Device Identification File (DIF). Click download and select the license file (.lic). Go to the NAS Licensing Center, download the license file (.lic) and click the Upload button. How do I disable authorization? Click deactivation, then select the deactivation method: Use THE ID NAP zgt; tick the box next I read and figured out the strain and want to continue., click next and then complete the deactivation process. Offline Deactivation zgt; tick the box next to I read and understood the war and want to continue., and click next. Click download, download license deletion file (. LUF) from the current device to the computer connected to the Internet. Download LUF on the NAP license website: . Click My License and select a license to deactivate. Go to Activation and Installation to deactivate the license. Select Offline Deactivation and download the deactivation file (LUF) to complete the deactivation. Please note that the offline deactivation process only ends when LUF is uploaded to the NAP license website. Note: If you decide to disable a product license, you won't be able to access a related app on that device, nor will the license be transferred to another device. Note: If you use offline deactivation, the application's license list will be disabled and cannot be enabled directly. You have to activate it again after adding the license key. Restoring Licenses If the device has been returned to its original settings, licenses will become unavailable. At this time, you can reinstate previous licenses by clicking the Recovery button at the License Center to restore the license. Please note that using this feature: Your yours must be connected to the Internet. To obtain a license tied to a current device, you must log in using the NOP ID. If the device is repaired, please contact the NPS help. Support. qnap surveillance station license hack
